PROFESSIONAL SUMMARY

Frontend Engineer with 5+ years of experience architecting high-performance web applications for fintech, CRM, and SaaS platforms. Proven track record of optimizing Core Web Vitals, architecting reusable component libraries, and shipping complex features end-to-end in fast-paced, ambiguous environments. Strong command of modern TypeScript/React ecosystems, with deep expertise in SSR/ISR strategies, front-end system design, and developer tooling. Passionate about building accessible, secure, and globally scalable user interfaces.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Frameworks & Libraries:** React, Next.js (App Router), Vite, Node.js
- **State Management:** Redux (Toolkit), Zustand, React Context, Jotai
- **Testing:** Jest, React Testing Library, Vitest, Playwright (E2E)
- **Styling & UI:** Tailwind CSS, SCSS, Styled Components, Framer Motion, Radix UI
- **Performance & Architecture:** Web Vitals (LCP/INP), Bundle Optimization, SSR/ISR/CSR, Code Splitting, Module Federation
- **DevOps & Tools:** Git (CI/CD), Vercel, AWS (S3/CloudFront), Figma (Design-to-Code), Webpack, ESLint
- **AI-Assisted Development:** Cursor, GitHub Copilot, ChatGPT (used for prototyping without sacrificing code quality)

WORK EXPERIENCE

Frontend Engineer | Tech201 | Jul 2025 – Present (Full-time)

- Architected a migration from Client-Side Rendering (CSR) to a hybrid SSR/ISR strategy, reducing Largest Contentful Paint (LCP) from 2.4s to 1.4s and boosting organic search traffic by 18% within 3 months.
- Designed and deployed a modular, composable component library (Storybook-integrated) used across 5 internal B2B products, cutting UI development time for new features by roughly 30%.
- Led the end-to-end delivery of 5 major product features (including a real-time analytics dashboard) by collaborating cross-functionally with product, design, and backend teams in a high-ownership, flat-structured environment.
- Implemented comprehensive test coverage using Jest and React Testing Library, reducing production regression bugs by 25% across release cycles.
- **Stack:** Next.js 14, React, TypeScript, Tailwind, Redux Toolkit, Jest, REST APIs.

Contract Frontend Engineer | Spectra Technologies (Fintech/Crypto) | Apr 2026 – Present (Side Contract)

- Led the greenfield development of a secure, customer-facing crypto-to-fiat wallet dashboard for a pre-seed fintech startup, serving early adopters in the African market.
- Built complex, secure UI flows for KYC identity verification, real-time transaction histories, and P2P payment onboarding using React and Next.js.

- Collaborated directly with the CTO to design a secure frontend architecture, implementing robust token management and request throttling to mitigate API abuse.
- **Stack:** React, Next.js, TypeScript, Tailwind, REST APIs.

Frontend Developer (Contract) | VastRemit (Cross-Border Payments) | Apr 2026 – Present (Side Project)

- Built responsive, accessible UI components for cross-border remittance flows, managing complex real-time transaction statuses and currency conversions.
- Optimized dynamic form handling and validation logic to reduce user drop-off during the payment initiation stage.
- **Stack:** React, Next.js, TypeScript, Tailwind CSS, REST APIs.

Freelance Frontend Developer | Fiverr, Upwork & Direct Clients | 2019 – Present

- Delivered 15+ production-grade web applications for independent clients across e-commerce and events management sectors, managing projects from initial requirements gathering through to deployment and maintenance.
- Translated high-fidelity Figma designs into pixel-perfect, responsive, and accessible interfaces (WCAG 2.1 AA standards) under tight deadlines.
- Maintained long-term client relationships, including a 4-year engagement with an events-management business, handling continuous feature requests and performance updates.

EDUCATION

B.Sc. Computer Science | University of the People | 2023 – Present

Relevant Coursework: Data Structures & Algorithms, Discrete Mathematics, Operating Systems, Database Systems.

CERTIFICATIONS & ACHIEVEMENTS

- **Certificate of Recognition** – Arit Developer Circle Hackathon (**May 2025**)
- **freeCodeCamp:** JavaScript Algorithms & Data Structures, Front End Development Libraries, Responsive Web Design
- **Current Focus:** LeetCode (150+ problems) & Frontend System Design (Building scalable UI architectures).
